

Second Release of New Advanced Fleet Management Web Frontend

January 7th, 2019

After extensive life testing with several of our key customers we have now officially released the second version of our Web Front End. This release includes all the advanced features our customers have gotten used plus provide several new functions providing further advancements

So, our customers will get all the reports and data they are used to for many years while benefitting from many new features. Our new front end is very user friendly, really fast, flexible and equipped with all features required for decision support, exception alerts, situation analysis and fact based planning.

Here is a summary of our features:

- Real time highly interactive graphic: See all vehicles at their current position with an accuracy of less the 3 seconds with detailed status information anywhere at the airport
- Customer specific maps can be added with specific airport information not provided by Google Maps or Open Street. Rules can be specifically attached to specific map regions.
- Multiply layer technology makes it easy to configure zones and rules directly in the map or show indoor or underground layers
- Easy to use advanced selection and search functions provide
- Customizable Dashboard
- Login / role specific information display and functionality
- High performance even for complex reports for a long time period
- All mobile devices are supported

We are receiving excellent feedback from our customer already using the fist release of our new Web Front end. The added features included in this second release will provide even more benefits to ground handlings.
